

## Discussion and Purpose

The purpose of this white paper is to effect certain immediate changes, listed here:

- 1) Use of and maturation of the Automatism Defense as a legal tool to persuade, healthcare professionals and institutions, *through litigation*, to require PHARMACOGENETIC TESTING as “standard of care” as well as “duty to care” prior to issuing a prescription.
- 2) Use of the Automatism Defense on high profile cases to expose to the public the harm done to patients and the society by Pharmaceutical manufacturers who have been purposely suppressing medical education and public disclosure that millions of individuals are not able to metabolize, upwards of 50% of pharma drugs, causing suicidal and heinous homicidal acts, physiological drug addictions and overdose, harm to themselves and society.
- 3) To apply the correct and applicable legal defense to homicide perpetrators and families of suicide victims who are confirmed as polymorphic individuals having been prescribed contraindicated drugs that caused them to act out in what can only be described as a nightmare of involuntarily and unconscious ideations and acts caused by the inability to metabolize drugs prescribed by physicians and institutions.
- 4) To demand and facilitate that all United States medical schools provide, *as a requirement*, a comprehensive course in Pharmacogenetics.
- 5) To demand and facilitate that all current healthcare professionals, all categories of physicians, and future health professionals and administrators, including but not limited to pharmacists, dentists, physician assistants, nurses, senior living administrators, dental and medical board administrators, hospital administrators, pharma/manufacturers’ salesmen and any who are authorized to prescribe, recommend, dispense or sell drugs be required to take continuing education courses in Pharmacogenetics.
