Eric Harris, age 18
Mathew Bernard, age 19
Alex Spourdalakis, age 16
David Dannemann, age 22
Mathew Phelps, age 28

SSRI Stories excerpts of 6,000 homicides/suicides on prescription drugs

Case Series and review: Antidepressant-induced akathisia-related homicides associated with diminishing mutations in metabolizing genes of the CYP 450 family

Review: Treatment Emergent Violence to Self and Others;
A literature Review of Neuropsychiatric Adverse Reaction for Antidepressant and Neuroleptic Psychiatric Drugs and General Medications

SUICIDE AND MURDER...Jim Mercola, MD

Cost Analysis of hospitalization and treatments: Psychiatry meets pharmacogenetics for the treatment of revolving door patients with psychiatric disorders*

Cost Analysis: Pharmacogenetic testing among patients with mood and anxiety disorders is associated with decreased utilization and cost*

***note:** The Pharmaceutical industry has suppressed medical school education in pharmacogenetics for years as they have known, for quite a while, that the manufacturers would lose billions of dollars if the public knew that their drugs (including cancer drugs) cannot be metabolized by millions of people - resulting in disability, psychosis, imprisonment and death.

The vast majority of medical doctors, hospitals and educational institutions in the United States offer no primary education in medical school; nor continuing education courses in drug interactions and pharmacogenetics. The cookie cutter dispensing of prescription drugs by every **uneducated** category of physicians from pediatricians-family doctors-psychiatrists presents a huge burden to the patient, the patient's family, to schools for special need education programs, senior living facilities, prisons, the justice system and the society. Moreover, it is the refusal by medical institution and their administrations, being well aware of the value of pharmacogenetic testing now being initiated as standard of care by eminent institutions like *Mayo Clinic, St. Jude's Children's Hospital and Sloan Kettering*, that are knowingly (emphasis added) committing Medicaid and Medicare fraud to the tune of billions of dollars over the years. It is up to the legal profession, States' Attorney Generals, to push this envelope. Mark my words...it will be a very remunerative business for attorneys who get in early.
